Hotstrings

Ready? Let's begin!

Mission

Automatic text replacement at your fingertips, with minimum overhead from your side, to support you on your everyday routine, saving your time and bringing extra value to every keyboard use.

Short text automatically replaced into long

Once defined text replacement definitions work in every text field.

Saving time and effort

Reentering existing definitions saves not only time, but also reduces amount of key strokes

One short text can trigger menu

One short text can trigger up to 7 long, at your choice, thanks to menu.

Easy to setup

Single file, free libraries of definitions and you are ready to start.

Independent of installation

You can take your definitions with you even on USB stick wherever you need to.

No more repeating of text phrases

Once defined, ctext definition can be recalled wherever you want.

Welcome

Thank you for your attention to Hotstrings

As everyday keyboard user I realized how many text phrases I do repeat each day. I wanted to have magic wand which would automatically replace repeating phrases each time I start to type it in.

As I don't know any fairy (yet), I've created such automatic text replacement tool by myself. Now it makes its job and even more as you get clickable, windows oriented interface (aka GUI) to make it easy to your fingertips.

Today I'm proud to provide you with many unique features which enable you to reduce time to enter the same text definitions, configure Hotstrings engine to your liking and let you bring to your customer text content wherever you need it.

Now you can benefit from Hotstrings in a way you need.
Let's make your PC personal again.

Maciej

Maciej, founder.

Meet Hotstrings

Free version | **0 €** | VS. | **Full version** | **25 € / year**

(functions vs. versions)

function	basic edition	full edition
unlimited number of text replacement definitions	☑	☑
